ATTENTION

THE COLOR YOU HAVE PURCHASED IS A "FLAT" OR "MATTE" FINISH COLOR. Flat/Matte finish colors are susceptible to being damaged by gasoline, harsh cleaners, and other chemicals. Extreme caution must be used to avoid damage to your paintjob.

Under normal conditions, the matte/flat colors we have developed will have sufficient durability to last for years. Riding and washing your vehicle will not harm the finish. However, gasoline if left on the flat/matte color for any period of time can soften and therefore ruin the finish. We produce eggshell clearcoats in pen (TFC-900), jar (TU900), aerosol (KK8) and professional sizes (P-FKT600). For larger areas, we highly recommend using the P-FKT600 kit for the best results. This will require a HVLP spray gun, which are fairly affordable, especially from Harbor Freight. The KK8 kit works also, but requires more precision and experience for the best results.

It is extremely important to test the color with the KK8 clear *before* proceeding with your paintjob. This will enable you (or your painter) to see how to spray the color/clear and how flat or matte the finish will turn out. ColorRite is not responsible for slight color variances due to KK8 clearcoat application.
